Blochem. Blophys. 375:385-388(2000).
-!- FUNCTION: Methylates OH residues of flavonoid compounds. Substrate preference is quercetin > myricetin.> luteolin. Dihydroquercetin is not a substrate. Has an optimal pH of 7.5.
-!- CATALYTIC ACTIVITY: Sadenosyl-L-methionine + 3,5,7,3',4'-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Kotani H., Nakamura Y., Sato S., Asamizu E., Kaneko T., Miyajima N.,

Submitted (DEC-1999) to the EMBL/GenBank/DDBJ databases.
-!-FUNCTION: Catalyzes the conversion of caffeic acid to ferulic acid
and of 5-hydroxyferulic acid to sinapic acid. The resulting
products may subsequently be converted to the corresponding
alcohols that are incorporated into lignins.
-!- CAPALYTIC ACTIVITY: S-adenosyl-L-methionine + 3,4-dihydroxy-trans-
                                                                        -----RILRL-
                                                                                                                                                                                                      TISSUE SPECIFICITY: Fruit. Not expressed in leaf.
DEVELOPMENTAL STAGE: Expression increases during fruit development but decreases during ripening.
                                                                                                                                                                               -LKRWVHEEDLTV-----FEVSLGTPFWDFINKDPAYNKSFNEAMACDSQMLNLAFRDCN

                                                                                                                                                                                                                                           CC 5,7,3',4'-
Dentahydroxyflavone = S-adenosyl-L-methionine + 3,5,7,3',4'-
Dentahydroxyflavone = S-adenosyl-L-homocysteine + 3-methoxy-
S,7,3',4'-terrahydroxyflavone.
CC -!- FATHWAY: Phenylpropanoid pathway.
CC -!- MISCELLANEOUS: The Vmax value for flavonoid compounds is two to
threefold higher for OWT1 than for OWT2.
CC -!- GNMILARITY: Belongs to the methyltransferase superfamily. Family
C -!- CAUTION: It is not sure if OWT1 and OWT2 are really encoded by two
different genes or if they represent cloning artifacts.
CC -!- CAUTION: In shyltransf.

                          -!- FUNCTION: Methylates OH residues of flavonoid and phenylpropano compounds and shows a higher affinity for flavonoid than phenylpropanoid substrates. Substrate preference is quercetin (flavonoid) = luteolin (flavonoid) > 5-hydroxyferulic acid (phenylpropanoid) >> apigenin (flavonoid) = kempferol (flavonoid) >> apigenin (flavonoid) = kempferol (flavonoid).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-AUG-1992 (Rel. 23, Last sequence update)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: Catalyzes the conversion of caffeic acid to ferulic acid and of 5-hydroxyferulic acid to sinapic acid. The resulting products may subsequently be converted to the corresponding alcohols that are incorporated into lignins.

CHTALYTIC ACTIVITY: S-adenosyl-L-methionine + 3,4-dihydroxy-transcinnamate = S-adenosyl-L-homocysteine + 3-methoxy-4-hydroxy-trans-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       34 LKMMVELDIPDIIHSHSHGQPITFSELVSILQVPPTKTRQVQSLMRYLAHNGFFEIVRIH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SIMILARITY: Belongs to the methyltransferase superfamily. Family 2. COMT subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                    Capsicum chinense (Scotch bonnet) (Bonnet pepper).

"Characterization of two cDNA clones which encode O-methyltransferases for the methylation of both flavonoid and phenylpropanoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CAUTION: It is not sure if OWT1 and OWT2 are really encoded by two different genes or if they represent cloning artifacts.
                                                                                                                                                                                                                                                                                                                                                                       Arch. Blochem. Biophys. 351:243-249(1998).

-!- FUNCTION: Methylates OH residues of flavonoid and phenylpropanoid compounds and shows a higher affinity for flavonoid than phenylpropanoid substrates. Substrate preference is quercetin (flavonoid) = luteolin (flavonoid) = 5-hydroxyferulic acid (phenylpropanoid) > caffeic acid (phenylpropanoid) > apigenin (flavonoid) = kempferol (flavonoid).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        123 VLDGGIPPNKAYGMSSFEYHGTDPRFNKVFNKGMSDHSTITMKKVFQTYQGFQGLTSLVD

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -!- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + 3,5,7,3',4'-
pentahydroxyflavone = S-adenosyl-L-homocysteine + 3-methoxy-
5,7,3',4'-tetrahydroxyflavone.
-!- PATHWAY: Phenylpropanoid pathway.
-!- MISCELLANEOUS: The Vmax value for flavonoid compounds is two to threefold lower for OMT2 than for OMT1.
-!- SIMILARITY: Belongs to the methyltransferase superfamily. Family 2. COMT subfamily.
                                                                    Chrysosplenium americanum (Golden saxifrage).
Eukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta,
Spermatophyta, Magnoliophyta, eudicotyledons, core eudicots,
Saxifragales, Saxifragaceae, Chrysosplenium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      34;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: Catalyzes the conversion of caffeic acid to ferulic acid and of 5-hydroxyferulic acid to sinapic acid. The resulting products may subsequently be converted to the corresponding alcohols that are incorporated into lignins.

CATALVIIC ACTILITY: S-adenosyl-L-methionine + 3.4-dihydroxy-transcinnamate = S-adenosyl-L-homocysteine + 3-methoxy-4-hydroxy-transcinnamate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PATHWAY: Lignin biosynthesis. SIMILARITY: Belongs to the methyltransferase superfamily. Family

Submitted (JUL-1997) to the EMBL/GenBank/DBW databases.

-!- EUNCTION: Catalyzes the conversion of caffeic acid to ferulic acid
and of 5-hydroxyferulic acid to sinapic acid. The resulting
products may subsequently be converted to the corresponding
alcohols that are incorporated into lightins.

-!- CATALYTIC ACTIVITY: 5-adenosyl-L-methionine + 3.4-dinydroxy-trans-
cinnamate = S-adenosyl-L-homocysteine + 3-methoxy-4-hydroxy-trans-
                                                                                                                          42 SDAVVDGGIPFNKAYGMTAFEYHGTDPRFNKVFNQGMSNHSTITMKKILETYTGFDGLKT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FUNCTION: Catalyzes the conversion of caffeic acid to ferulic acid and of 5-hydroxyferulic acid to sinapic acid. The resulting products may subsequently be converted to the corresponding alcohols that are incorporated into lignins.

CATALYTIC ACTIVITY: S-adenosyl-L-methionine + 3,4-dihydroxy-transcinnamate = S-adenosyl-L-homocysteine + 3-methoxy-4-hydroxy-transcinnamate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -----EIVRIHDNIEAYALTAASELLVKSSE-LSLAPMVEYFLEPNCQGAWNOLKRW

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
